

Plumbing Diagram

A sidearm heat exchanger can be a great way to save money and create hot water for free. If your going to be running an outdoor wood furnace, why not hook up a heat exchanger?

Create a manifold out of 1" x 3/4" tee stock or tees closely spaced
spacing on valves: calculated at 4x diameter of pipe -
never to exceed 12" ie: 4x1/2" dia pipe = 2" apart

Diagrams are for illustration purposes only - spacing is not actual.
